

Data sheet

91539-ICAS

CAD polyesterfilm, colorline

Product description:

Polyester film both sides matt for absolute dimensional stable CAD-plots with excellent brilliant colour-reproduction and exact sharp edge ink drying, back side for manual drawing.

Specific feature:

The asymmetric (AS) film 91539-ICAS is suitable for monochrome and color CAD applications on inkjet plotters and -printers. Good drying and smear-resistance also in case of the intensively pigmented black ink on HP 1050/1055CM. High-contrast reproduction and precise edge-sharp ink drying characterize this film. Backside for manual drawing. This product is especially used where good flatness and high dimensional stability are required. Its transparency allows blueprints, microfilms and duplicating on large size copiers.

Processing:

For quality reasons the processing and storage of 91539-ICAS should take place in a climate from 30 to 75% relative humidity and at a temperature from 10-25°C . The light resistance of prints depends vitally on the used ink and the actual sun exposure. Thus the storage should always take place at a dark place. The material should be stored in its original packaging (film tube and covering box), at a cool and dry place, clean and dustfree.

Technical specification:

Material:	FOLIE
Application Area:	NUR IM INNENBEREICH
Surface:	TRANSPARENT
Specific gravity:	125,00g/m ²
Thickness:	100,00µm
B1-cert.:	nein
Cold lamination:	ja
